Contract GS-07F-0028T

Blast Protection and Physical Security

GlassLock's **BlastBlind™** (Patent Pending) offers a wide variety of retrofit solutions for buildings of architectural or historical significance. Finite Element models of BlastBlind™ are available to match the geometry and construction of typical windows within a facility.

BlastBlind™
meet ISC/GSA
Performance Criteria Level 3
Blast Test Reports
available

Patent Pending

BlastBlind™: Catcher-system are designed for retrofit/renovation on existing buildings that currently have any number of styles and types of window blinds or treatments, and do not want

Glass Failure, Glass Hazard

to alter the architectural sight lines and yet require significant blast hazard mitigation.

BlastBlind™ can be fabricated to look like any standard window blind product or vintage Venetian type for buildings that have a historical significance.

Analysis and Design:

BlastBlind™ was analyzed using LS-DYNA, a non-linear Finite Element Analysis (FEA) program developed by the Livermore Software Technology Corporation.

Contract GS-07F-0028T

Blast Protection and Physical Security

GlassLock's **BlastBlind™** (Patent Pending) **have shown to provide significant protection while preserving the physical nature and appearance of historic windows.**

BlastBlind™
meet ISC/GSA
Performance Criteria Level 3
Blast Test Reports
available

Patent Pending

The ISC Design Criteria States: that the window system design on the exterior façade should be balanced to mitigate the hazardous effects of flying glazing following an explosive event. In a conven-

Glass Failure, Glass Hazard

tional system, the walls, anchorage, and window framing should fully develop the capacity of the glazing material selected. However, **BlastBlind™** act as a catcher system rather than attempting to retain the glass in the frame. As a result, the intent of the Criteria can be met by ensuring that the **BlastBlind™** can adequately catch the glass from the design load and transfer the resulting reactions into the structure without failure of key components of the system structure.
